

Baumer

Passion for Sensors

Fiber-optic sensor and cable

Manual

**ELTRA**
trade

Baumer fiber optic sensors are miniature photoelectric sensors.

Fiber optics products is dived into several main categories depending on material and shape:

- With glass cables
- With plastic cables
- Cylindrical
- Square
- Miniaturized
- Specialized

Baumer hubner fiber optic are very compact and rugged optical sensors. They perform accurate measurements in cramped spaces even in harsh conditions.

To find out stock ability and delivery time to your region, please contact our manager.

General information

Fiber optics are the extended vision of conventional sensors and, due to their miniature construction, can be installed directly in the most difficult ambient conditions. As only light is conveyed, fiber optics are intrinsically safe, which adds to their range of applications.

Plastic fiber optics are characterized primarily by the properties of the employed raw material – the plastic. Advances in the manufacture of plastics permit bending radii of just 1 mm for the optical fibers, which is completely impossible for glass fibers. Fiber materials are now available which are extremely tolerant to bending and thereby make their use in drag chains possible.

Typical applications

Due to their versatility, optical fibers can be used in the most diverse applications. The small, space-saving sensing heads are very suitable for use in very constricted conditions. It is also possible to monitor whole areas or execute precise positioning by the different arrangements of the fibers.

- Due to the light weight and space-saving construction, optical fibers can be integrated directly in pick & place tools
- Detection, differentiation and positioning of the most diverse objects
- Monitoring of whole areas with fiber optic arrays with linear fiber arrangement
- Use at high, low or constantly fluctuating ambient temperatures
- Detection of levels or leaks, including hazardous liquids
- Detection of transparent media such as glass, wafers or films with focused fiber optic reflective types

Characteristics and advantages

Independent of the environment

As only light is conveyed, electromagnetic fields, high or low temperatures have no effect on the functional reliability.

Space-saving

The smallest sensing heads have a diameter of 1,5 mm and are only 10 mm long. With bending radii of just 1 mm, it is possible to integrate the eye of the sensor even in the most constricted places.

Precise light spots

Fiber cross-sections of only 0,25 mm generate a fine core beam in fiber optic through beam types, whereas doubling lenses in fiber optic reflective types permit precise light spots of 0,1 mm.

Application-specific fiber arrangement

The coaxial fiber arrangement permits optimum light distribution over the receiver fibers and thereby makes precise positioning of objects possible. Also, fiber optic arrays with a linear fiber arrangement allow a whole area to be monitored or the detection of randomly conveyed objects.

Application feedback

Multi-digit displays integrated in the fiber optic sensors permit the stability of the application to be assessed and make fault analyses possible.

Fast processes

Fiber optic sensors with response times of only 50 microseconds allow the detection of objects even in very fast processes.

Technology and operation

The technology is based on intensity differences. The fiber optic through beam types detect an object breaking the light beam between the emitter and receiver. The fiber optic reflective types evaluate the amount of light reflected back from an object. The high-resolution analog/digital conversion in the fiber optic sensors permits very slight changes to be evaluated. This is important where the detection of small objects or differentiation of the finest contrasts is demanded.

Fundamentally, the fiber optics form a unit with the corresponding processing units, and the type of fiber optic head is mainly decisive for the detection of objects. The table below is intended to provide aid in understanding the large range of different sensing heads:

Version/type	Properties	Field of application	Example types
Standard	Large selection of different shapes. Economical	Standard applications, simple object detection	FUE 200C1003 FUE 200C1004
Coaxial	Homogenous light distribution over all receiver fibers. Lens adaptation possible	Optimally suited for positioning tasks. Highly accurate in combination with focusing lenses	FCE 200C1Y00 FCE 200D1Y00
Side light exit	90° light exit Reduced beam angle More installation space	Constricted conditions	FUE 200C4Y00 FSE 200C4002
Array	Linear arrangement of the fibers. Line lengths of 5,25 ... 21 mm. Reflective or through beam types	Detection of objects which cannot be precisely conveyed. Measurement of object sizes or edge positions	FUE 200C6Y00 FSE 200C6Y00
Longer range Parallel beam	Integrated lens Small beam angle Long range	Object detection and positioning over a long distance. No influencing by interfering objects close to the optical fiber	FLE 200C1Y00 FPE 200C1Y00
Highly flexible	Min. bending radius down to 1 mm Suitable for flexible installation	Constricted conditions	FUE 200E1Y00 FSE 200F6Y00
Bendable	Extremely bendable, designed for bending more than 1 million times.	For use in drag chains or on moving parts	FSE 200D1Y50
Small light spot	In combination with focusing lenses, a light spot of only 0,1mm can be produced.	Detection of very small objects Highly accurate edge positioning	FCE 050C1Y10 with lens 134544
Level detection	Special sensing tip to avoid liquid residues. Version for pipe/hose fitting	Detection of levels in different liquids, in or out of contact	FUL 200D2Y00 FSL 500C6Y00 FOC 500C6Y00
Spezial versions	Heat and cold resistant Chemical and oil resistant	For extreme environmental. Conditions such as chemical or aggressive surroundings or temperatures from -60 ... +350 °C	FUG 500C1Y00 FUC 200C2Y00

Fiber optic sensors of the ranges FVDK 66 and FVDK 67 – versatile and multifunctional

The generation of multifunction fiber optic sensors is particularly suitable for handling processes, where very fast movements as well as exact positioning or the detection of very small objects are important. A single sensor undertakes the tasks which were formerly performed by many different sensors. The user can choose from 3 to 8 different operating modes from very short response time to high sensitivity to adapt the sensor optimally to his application. Despite the all-in-one concept, the requirement for simple operation is also fulfilled.

	FVDK 67	FVDK 66
Sensing range (FSE 200C1002)	1200 mm	340 mm
Sensing distance (FUE 200C1003)	300 mm	130 mm
Min. response time	50 µsec	250 µsec
Speed / sensing modes	5 levels	3 levels
Adjustment	Automatically via teach-in manually with +/- button	Automatically via teach-in manually with +/- button
Suppression of reciprocal influences	8 sensors	2 sensors
Long-term stability	yes	yes
Timer	On- or Off-Delay On- and Off-Delay One-Shot One-Shot and On-Delay	On- or Off-Delay
Available versions	Standard With external teach-in Master/Slave 2 switching outputs	Standard With external teach-in Master/Slave
Additional functions	Factory setup Rotate display Delay / freeze display Keylock Chemical and oil resistant	Factory setup Rotate display

Reduced wiring

With the master/slave version up to 16 sensors can be connected together to one unit (consisting of one master and the appropriate number of slaves). Only the power of the master has to be wired. The slaves are supplied through the side plug. For maximum flexibility in the wiring of the individual sensor signals each slave has a single-core cable. Series 66 and 67 can be combined in any order.

Application feedback

The application feedback is particularly important during commissioning if consistent detection is to be ensured. The switching point and the relative received signal are indicated simultaneously on the 2x4 digit display of the FVDK 67 range. With this information it can be determined at a glance whether the switching point has been optimally adjusted.

Long-term stability

In both sensor series measures have been taken to ensure the long-term stability of the switching function. This is done either by compensating the aging of the emitting LED or by repositioning the switching threshold.

Teach-in or potentiometer? Just simple operation

The fiber optic sensors of the FVDK 12, 22 and 60 ranges are characterized particularly by their simple handling. The sensitivity can be adjusted either with a potentiometer or a Teach-in button. Differently colored LEDs or simple displays provide the adjustment feedback. The sensor ranges differ primarily in their speed, sensitivity, hysteresis functions and supplementary functions such as timers, external Teach-in or logical output gates. However, all have the same thing in common: regardless of where the sensor is installed, the adjustment can be made practically without the need for operating instructions.

Type FVDK 12

- Integrated, dynamic Teach-in allows the most reliable detection of moving objects or small parts for which it is difficult to find an exact Teach-in position
- High-speed version with a response time of only 50 µs
- Integrated alarm output warns in advance of excessive soiling
- Protection class IP 65

Type FVDK 22

- Two sensors in one housing reduces the necessary wiring
- The two integrated sensors do not interfere with each other
- It is possible to link the two outputs logically
- Version with external Teach-in from the controller

Teach-in or potentiometer? Just simple operation

Type FVDK 10

- Smallest fiber optic sensor
- Easy and quick sensitivity adjustment with potentiometer
- Protection against optical interference between up to 3 optical fibers

S_b = 160 mm
T_w = 45 mm

- sensitivity adjustable via potentiometer
- suppression of mutual optical interference

general data

actual range S _b (FSE 200C1002)	160 mm

S_b = 440 mm
T_w = 120 mm

- sensitivity adjustable via potentiometer
- fast and high sensitivity version available
- integrated alarm output

general data

light source	pulsed red LED
light indicator	LED green
alignment / soiled lens indicator	LED green, flashing
output indicator	LED red
adjustment	potentiometer
wave length	680 nm
suppression of reciprocal influence	yes

electrical data

response time / release time	< 0,5 ms
voltage supply range +Vs	10 ... 30 VDC
current consumption max. (no load)	35 mA
voltage drop V _d	< 1 VDC
output function	light / dark operate switchable
off delay	40 ms
output current	< 100 mA
short circuit protection	yes
reverse polarity protection	yes

mechanical data

width / diameter	10 mm
height / length	29,7 mm
depth	60 mm
type	rectangular
housing material	polycarbonate/ABS

ambient conditions

operating temperature	-20 ... +60 °C
protection class	IP 40

- leakage monitoring

general data

type	Diffuse sensors (Leakage sensor)
measurement type	contact with medium
response time / release time	0,05 ... 5 ms
type of head (fiber optic cable)	cylindrical smooth (axial)
width / diameter (head)	13 mm
height / length (head)	30,9 mm
depth (head)	9,9 mm
material (head)	PFA
bending radius	20 mm
cable jacket diameter	2,2 mm
material cable jacket	PFA (chemically resistant)
material (fiber optic cable)	plastic
length (fiber optic cable)	5000 mm
operating temperature	-30 ... +70 °C

Sensing distance/response time:

General information

In contrast to plastic fiber optics, glass fiber optics contain hundreds of individual fibers. Each one conveys a part of the emitted light. Depending on the arrangement of the individual fibers, a homogenous light spot or a line can be produced. Also, glass is a high-quality, durable material, which guarantees a long and constant service life. This is only one of the reasons that glass optical fibers are used in the telecommunications industry. The high heat resistance also allows fields of application which are difficult or completely impossible with other sensors.

Typical applications

The wide range of sheath materials and sensing heads make it possible for you to adapt the sensors optimally to your machine concept. A way can always be found to fasten the small fiber optic heads. Due to the different available lengths, the fiber optic sensor can be placed individually at an optimum point.

- Metal-sheathed optical fibers can also be used under harsh conditions
- Detection, differentiation and positioning of different objects
- Monitoring of areas using fiber optic arrays with linear fiber arrangement
- Use at high, low or constantly fluctuating ambient temperatures
- Ranges of up to 1,4 m with fiber optic through beam types

Characteristics and advantages

Independent of the environment

As only light is conveyed, electromagnetic fields or high/low temperatures have no effect on the functional reliability.

(plastic-sheathed: -25 ... +70 °C)

(metal-sheathed: -25 ... +250 °C)

Rugged

Metal-sheathed optical fibers are protected against mechanical effects (chips etc).

All fiber optic sensors are fitted with a rugged metal housing.

Stable operation

High-quality glass fibers ensure stable operation for a long period. All fiber optic sensors are equipped with high-power infrared light sources, which provide sufficient excess gain even with a certain degree of soiling.

Area monitoring

Fiber optic arrays with a linear fiber arrangement permit an area to be monitored or the detection of objects which are not precisely conveyed.

Optimum installation

Apart from the common threaded types, fiber optic sensors with smooth sleeves or side light exit are available.

Fast processes

Fiber optic sensors with response times of only 50 microseconds permit the detection of objects even in very fast processes.

Technology and operation

By exploiting the so-called total reflection, it is possible to convey light in a medium such as glass without great loss.

Explanation of total reflection

When light waves reflect on a barrier layer between two media with different optical densities, they do not simply carry on in a straight line. When they penetrate from an optically denser medium (e.g. glass fiber core) into an optically thinner medium (e.g. glass sheath), there is a smaller angle, the critical angle, under which total reflection occurs. The light wave is reflected back and remains in the optically denser medium.

The glass sheath coating the core fiber is decisive for the transmission of light waves almost completely without loss. This ensures an optically consistent density of the sheath and the core and thereby permits a practically constant number of total reflections. This also occurs when the optical fiber is slightly bent. If there would be no core sheath, it would be highly decisive for the total reflection whether the optical fiber is used in an air medium or, for example, water. The critical angle would then change decisively, which could permit an undesired escape of light under certain circumstances.

In the sensing principle, fiber optic solutions are based on intensity differences. With fiber optic through beam types, an object breaking the light beam between the emitter and receiver is detected. With the fiber optic reflective types, the amount of light reflected by an object is evaluated.

For more information, see the section on plastic fiber optics in this chapter.

Mounting and adjustment

Fiber optics series 15

The cap nut to fasten the fiber optics is supplied with every order.

If damaged or lost, the cap nut can be ordered under the following number:

Cap nut	10103230
---------	----------

Fiber optics series 18

The adjusting plate and cap nut are supplied with every order.

If damaged or lost, they can be ordered under the following part numbers:

Adjusting plate	10101958
Cap nut	10101480

Fiber optics series 30

The adapter and the cap nut must be ordered as accessories with every order.

Adapter	10102757
Cap nut	10102801

For installation of the fiber optics, the cover must be removed.

Sb = 310 mm
Tw = 60 mm

- sensitivity adjustable via potentiometer (axial)
- rugged metal housing
- infrared light source

general data

actual range Sb	310 mm
sensing distance Tw	60 mm
light source	pulsed infrared diode
light indicator	LED yellow
alignment / soiled lens indicator	LED, flashing
adjustment	potentiometer, 15 turn
wave length	880 nm
suppression of reciprocal influence	yes

electrical data

response time / release time	< 0,5 ms
voltage supply range +Vs	10 ... 30 VDC
current consumption max. (no load)	45 mA
current consumption typ.	30 mA
voltage drop Vd	< 1,8 VDC
output function	light operate
output current	< 200 mA
short circuit protection	yes
reverse polarity protection	yes

mechanical data

width / diameter	18 mm
height / length	50 mm
type	cylindrical threaded
housing material	brass nickel plated / PC
connection types	cabl 3 pin, 2 m

ambient conditions

operating temperature	-25 ... +55 °C
protection class	IP 65

Accessories

Glass fiber optics

S_b = 1200 mm
T_w = 240 mm

- sensitivity adjustable via potentiometer
- fast version available
- rugged metal housing

general data

actual range S _b	1200 mm
sensing distance T _w	240 mm
light source	pulsed infrared diode
light indicator	LED yellow
alignment / soiled lens indicator	LED, flashing
adjustment	potentiometer, 20 turn
wave length	880 nm
suppression of reciprocal influence	yes

electrical data

voltage supply range +V _s	10 ... 30 VDC
voltage drop V _d	< 1,8 VDC
output function	light / dark operate
output current	< 200 mA
short circuit protection	yes
reverse polarity protection	yes

mechanical data

width / diameter	15 mm
height / length	60 mm
depth	45 mm
type	rectangular
housing material	die-cast aluminum

ambient conditions

operating temperature	-25 ... +65 °C
protection class	IP 65

connectors and mating connectors

ESG 34AH0200	Connector M12, 4 pin, straight, 2 m
ESW 33AH0200	Connector M12, 4 pin, angular, 2 m
additional cable connectors and field wireable connectors: see accessories	

Accessories

10103415	Mounting bracket series 15 (L design)
10103230	Cap nut (replace) for fiber optics series 15

for details: see accessories section

Doubling lens M2,6

- Increases the actual range S_b by a factor of 6
- Contents: 2 pieces

For fiber optic: FSE 200C1Y00 / FSE 200C2Y00, FSA 200C1Y00, FSG 200C1Y00, FSE 200E1Y00

order reference

10134541 Doubling lens increases the actual range (paires)

Doubling lens M2,6 (side view version)

- Side view version
- Increases the actual range S_b by a factor of 6
- Contents: 2 pieces

For fiber optic: FSE 200C1Y00 / FSE 200C2Y00, FSA 200C1Y00, FSG 200C1Y00, FSE 200E1Y00

order reference

10134540 Doubling lens increases the actual range (paires)

Doubling lens M3

- Material: brass / glass
- Increases the actual range S_b by a factor of 6
- Contents: 2 pieces

For fiber optic: FSE 200C1004

order reference

10119910 Doubling lens M3 increases the actual range (paires)

Doubling lens M4

- Material: brass / glass
- Increases the actual range S_b by a factor of 6
- Contents: 2 pieces

For fiber optic: FSE 200C1004

order reference

10119909 Doubling lens M4 increases the actual range (paires)

Focusing lens M3 \varnothing 0,1 mm

- Light spot \varnothing 0,1 mm at a distance of 4,6 mm

For fiber optic: FCE 050C1Y10 (empfohlen), FCE 200D1Y00, FCE 200D1Y01, FCE 200E1Y00

order reference

10134544 Focusing lens M3 \varnothing 0,1 mm

Focusing lens M3 \varnothing 0,4 m

- Light spot \varnothing 0,4 mm at a distance of 7 mm

For fiber optic: FCE 050C1Y10 (empfohlen), FCE 200D1Y00, FCE 200D1Y01, FCE 200E1Y00

order reference

10134543 Focusing lens M3 \varnothing 0,4 m

Focusing lens M3 ø 2 mm

- Light spot Ø 2 mm at a distance of 19 mm

For fiber optic: FCE 050C1Y10 (empfohlen), FCE 200D1Y00, FCE 200D1Y01, FCE 200E1Y00

order reference

10134542 Focusing lens M3 ø 2 mm

Mounting bracket 1,1 mm

- Material: Aluminum

For fiber optic through beam type with 1,1 mm sheath diameters

order reference

10119912 Mounting bracket Ø 1,1 mm

Mounting bracket 2,2 mm

- Material: Aluminum

For fiber optic through beam type with 2,2 mm sheath diameters

order reference

10119911 Mounting bracket Ø 2,2 mm

Mounting bracket for fiber optic sensors series 12

- Material: Steel
- Delivered with every plastic fiber optic sensor series 12

For use with FVDK 12

order reference

10145702 Mounting bracket for fiber optic sensors series 12

Mounting bracket for fiber optic sensors series 22

- Material: Steel
- Delivered with every plastic fiber optic sensor series 22

For use with FVDK 22

order reference

10125534 Mounting bracket for fiber optic sensors series 22

Mounting bracket for fiber optic sensors series 60

- Material: Steel
- Must be ordered separately for series 66 and series 67 sensors

For use with FVDK 66, FVDK 67

order reference

10159806 Mounting bracket for fiber optic sensors series 60, 66, 67, 80

Reduction tube

- Set of 2
- Delivered with every 1 mm diameter plastic fiber optic

order reference

10140260 Reduction tube

Fiber optic cable extension

- Reduction in range due to fiber optic extension: 2 m = approx. 25%
- Reduction in range due to fiber optic extension: 5 m = approx. 60%

order reference

10145523 Fiber optic cable extension 5 m hochflexibel

10156738 Fiber optic cable extension 2 m

10158142 Fiber optic cable extension 5 m

Cutting tool

- Delivered with every plastic fiber optic

order reference

10114652 Cutting tool for plastic fiber optics

Adapter for glass fiber optic sensors 30

- Material: POM
- For use with fiber optic amplifier FZAM 30

order reference

10102757 Adapter series 30

10106042 Adapter series 30 (angeled fiber optics)

Adjusting plate for glass fiber optic sensors 18 (replace)

- Material: PETP
- For re-orders when lost
- Enclosed with every glass fiber optic of type A

order reference

10101958 Adjusting plate series 18

Cap nut for glass fiber optic sensors 15 (replace)

- Material: Nickel-plated brass
- For re-orders when lost
- Enclosed with every glass fiber optic of type B

For use with FVDM 15

order reference

10103230 Cap nut (replace) for fiber optics series 15

Cap nut for glass fiber optic sensors 18 (replace)

- Material: POM
- For re-orders when lost
- Enclosed with every glass fiber optic of type A

For use with FZAM 18

order reference

10101480 Cap nut (replace) for fiber optics series 18

Best prices

The fastest supply

Best level technical support

Customers in over 100 countries

Eltra Trade s.r.o. supplies full range of Baumer products with the best prices and delivery terms.

We supply:

- *Baumer Capacitive Sensors*
- *Baumer Inductive Sensors*
- *Baumer Magnetic Sensors*
- *Baumer Photoelectric Sensors*
- *Baumer Ultrasonic Sensors*
- *other Baumer products*

To find out stock ability and delivery time to your region, please contact our manager.
